The positioning of the interface on the base must be carried out by a technically competent person who is knowledgeable in the setup of the wheel base and the Leckey product. We recommend a stability safety check is carried out to ensure the combined seat and wheelbase meet the requirements of ISO 7176 Part 1. Mount the interface centrally on the wheel base to ensure the product is stable when in use.

Before locating the Mobility Interface onto your Chassis Frame, please ensure you have all the parts below.

- Interface Frame: 1 off
- M8 Screws: 4 off
- M8 Washers: 8 off
- M8 Nylock Nuts: 4 off

Locate the 4 off slots on the chassis, this is where the interface will be fitted.

Fit the interface on top of the slots with the cut out facing the open end of the chassis.

Secure the interface to the chassis using the screws, washers and nuts. Fit a washer on the top side of the interface and the lower face of the chassis.

Before fully tightening the screws slide the interface forward or backwards to the desired location.
